Core Lecture Series: Presentations covering key medical topics given by family physicians and sub-specialists.

PUF (Progress, Update, and Feedback): A time during which residents and faculty have an opportunity to critique current rotations and their family practice center experience. Residency issues are addressed and recommendations for improvement are developed.

Grand Rounds: Disease- and patient-focused presentation that illustrates the multi-dimensional problems encountered in Family Medicine. Typically these presentations begin with a case report of the patient's illness followed by a brief review of the literature detailing pathophysiology, diagnosis, and treatment. A key component of these talks is the behavioral and social implications of the condition or ailment presented.

OB, Gyne, Geriatrics, Derm, Musculoskeletal/Radiology and Pediatric/Adolescent Conferences: These lectures and case studies are presented by both residents and faculty.

aBIDE: (Accountability for Belonging, Inclusion, Diversity, and Equity) a time to discuss social justice, inequalities in medicine, resources for outpatients and ways in which we can have a positive impact on our community

Behavioral Science Conference: Residents explore psychosocial, social and cultural factors relevant to their practice.

Support Group: Residents discuss their experiences in the program. The Behavioral Scientist facilitates group discussion.

Practice Management: These conferences are geared toward second- and third-year residents, preparing them for contract negotiations, job interviews, and effectively managing a practice.

Journal Club: A time during which clinical evidence, literature, and journals relevant to Family Medicine are reviewed.

M & M: A review of poor patient outcomes within our practice.

Surgery: Presentations by surgeons covering key surgical topics typical of what family physicians can expect to see in practice.
